LinkedIn | GitHub: Jessomadic

PROFESSIONAL SUMMARY

Systems administrator with hands-on experience across MSP support, enterprise healthcare IT, endpoint deployment, Windows Server, Active Directory, server and storage hardware, networking, and automation. I build practical tools with PowerShell, Python, Batch, JavaScript, and SQL to remove repetitive work and make systems easier to support.

75%

less manual setup time

~150

MSP clients

45K / 20K / 400+

employees / devices / applications

CORE CAPABILITIES

WINDOWS INFRASTRUCTURE	Windows Server, Active Directory, Group Policy, Endpoint imaging, Workstation deployment, Server and storage hardware
IDENTITY & PRODUCTIVITY	Microsoft 365, Identity administration, Google Workspace, 3CX
NETWORKING & SUPPORT	SonicWall, Wireless access points, Network drops, Server network integration, Hardware diagnostics, Remote and on-site support
AUTOMATION & TOOLING	PowerShell, Batch, Python, JavaScript, Microsoft SQL Server, Git, GitHub Actions, Docker

TECHNICAL EXPERIENCE

Technical Engineer | Microworx

April 2024 - Present

- Designed and built a custom ticketing and POS operations system from the ground up in Python and JavaScript, backed by Microsoft SQL Server and connected to the existing point-of-sale workflow - without adapting a packaged ticketing platform.
- Developed a VSS live-imaging and delta-merging workflow that reduced recurring software costs and shortened endpoint deployment.
- Built a laptop battery-life benchmarking tool that automated video, audio, and office test cycles, tracked usage, generated reports, and shut systems down safely.
- Work directly with business clients on troubleshooting, technical projects, and specifications for servers, desktops, and laptops.

Environment: Windows endpoint deployment, VSS live imaging, Python, JavaScript, Microsoft SQL Server, Perl, PHP, Servers, Desktops, Laptops

Hewlett-Packard Enterprise Field Technician | HEMMERSBACH US LLC

May 2023 - Nov 2023

- Worked independently across long field-service routes in varied customer environments.
- Diagnosed and repaired HP laptops, desktops, A3/A4 printers, servers, and storage hardware.
- Replaced components, installed server hardware, and integrated new servers into client networks.
- Handled 2-5 field-service tickets per day across routes of up to 400 miles.

Environment: HP enterprise servers, Storage, A3/A4 printers, Laptops, Desktops, Hardware diagnostics, Network integration

Network Engineer | Simple Tech Innovations

Nov 2022 - May 2023

- Built Batch-based workstation deployment automation that made manual setup faster and configuration more consistent across clients.
- Moved between remote help desk work, on-site troubleshooting, equipment repair, and new hardware deployments for an MSP client base.
- Deployed and repaired computers, printers, wireless access points, and network drops.
- Reduced manual workstation setup time by 75% through Batch deployment automation.
- Supported roughly 150 MSP clients as part of a three-person technical team.

Environment: Windows deployment, MSP support, Batch automation, Workstations, Printers, Wireless access points, Network drops

EXPERIENCE CONTINUED

Help Desk - IT Analyst | University of Rochester Medical Center

March 2022 - Oct 2022

- Supported staff across University of Rochester hospitals and medical centers in a large enterprise healthcare environment.
- Resolved Active Directory permission, Citrix Workspace, ServiceNow, Epic access, malware, password, and Windows endpoint issues.
- Built a PowerShell Active Directory export tool that made large group-information requests repeatable and fast.
- Supported staff in a healthcare environment serving 45,000 employees, 20,000 devices, and 400+ applications.
- Worked on a 15-person help desk team handling 500-1,000 calls per day.
- Reduced requests covering hundreds or thousands of Active Directory users from hours or days of manual work to a CSV generated in seconds.

Environment: Active Directory, PowerShell, Citrix Workspace, ServiceNow, Epic, Windows endpoints, Account permissions, Enterprise healthcare IT

Game Repair and IT Support | Dave and Buster's, Inc

March 2021 - March 2022

- Repaired game hardware and supported staff with workstation, printer, password, and software issues.

Environment: Game hardware, Windows workstations, Printers, Staff IT support

SELECTED INFRASTRUCTURE CASE STUDIES

Custom Ticketing & POS Operations System

Problem: The legacy Perl and PHP process did not give tickets, labor, pricing, parts, and computer-build details one maintainable operational record. **Action:** Designed and built a custom Python and JavaScript application from the ground up without adapting a commercial or open-source ticketing base. **Result:** Created one maintainable system built around the business's actual workflow.

Technologies: Python, JavaScript, Microsoft SQL Server, POS Integration

VSS Live-Imaging Workflow

Problem: The existing imaging process carried recurring software costs and slowed endpoint deployment. **Action:** Developed an in-house live-imaging and delta-merging workflow around VSS. **Result:** Reduced recurring software costs and shortened endpoint deployment.

Technologies: VSS, Windows Deployment, Endpoint Imaging

NewComputerSetup

Problem: New-computer setup required repetitive manual configuration in client environments where PXE was not always available. **Action:** Built a customizable Batch workflow that applied the required software, settings, naming, upgrade, and handoff steps consistently. **Result:** Made workstation deployment faster and more consistent across MSP clients. Reduced manual workstation setup time by 75% through Batch deployment automation.

Technologies: Batch, Windows Deployment, Endpoint Administration

Active Directory Reporting Tool

Problem: Large Active Directory group-information requests required repetitive manual lookup and formatting. **Action:** Built a simple interface that recursively queried Active Directory group membership and exported name, email, and SAM account name to CSV. **Result:** Made large Active Directory exports repeatable and fast. Reduced requests covering hundreds or thousands of Active Directory users from hours or days of manual work to a CSV generated in seconds.

Technologies: PowerShell, Active Directory, Windows Forms, CSV

CERTIFICATIONS & TRAINING

CompTIA A+ - CompTIA

SonicWall Network Security Administrator (SNSA) -
SonicWall

3CX Basic Certified Engineer - 3CX

HP Enterprise Server Service Certification - HP

HP A3/A4 Printer Repair Certifications - HP

TRAINING

SC-300T00-A: Microsoft Identity and Access Administrator -
Microsoft
